

Global business, local precision – Platned localisation for IFS Cloud™ Business systems that fit every market you operate in

IFS Cloud gives businesses the power to unify operations, improve visibility, and drive efficiency across enterprise functions - from finance and supply chain to projects and service management. But no matter how powerful the platform, global success still depends on local relevance.

That's where Platned comes in.

As an IFS Gold Services Partner, Platned ensures your business systems aren't just powerful - they're compliant, regionally aligned, and fit for purpose in every market you serve. Our localisation services help tailor IFS Cloud to meet local statutory, tax, and accounting requirements while supporting group-wide consistency and control.

End-to-end localisation across the project lifecycle

Recovery phase – requirements and insight

- Engage with local and global business teams to gather detailed localisation needs
- Analyse and prioritise based on compliance risk, complexity, and operational impact
- Offer advisory on commonly overlooked localisation needs based on regional experience

Design phase – practical, compliant solutions

- Explore solution paths aligned to IFS best practices and industry benchmarks
- Present structured pros/cons analysis to support confident decisions
- Provide detailed CRIM (Customisations, Reports, Integrations, Modifications) documentation
- Demo localisation scenarios to validate approach

Build phase – specification and testing

- Develop clear functional specifications once CRIM scope is confirmed
- Coordinate with technical teams on development
- Conduct sandbox testing and support user acceptance testing
- Deliver targeted training to ensure operational readiness

Go-live and hypercare – compliance from day one

- Support go-live with localisation-specific readiness checks
- Assist with statutory and tax reporting during month-end close
- Monitor system performance and compliance in the early months

What we localise in IFS Cloud

By business function and module

Finance: procure-to-pay (P2P), order-to-cash (O2C), record-to-report (R2R), project accounting, cost control, inventory accounting, fixed assets

Tax: setup, accounting logic, VAT/GST reporting, tax invoice formats, and electronic invoicing

Accounting: local GAAP compliance, statutory reporting, audit readiness, and financial statement generation

Where we deliver

Regional coverage includes:

- **North America:** USA, Canada
- **Latin America:** Brazil
- **EMEA:** UK, Ireland, Germany, France, Portugal, Netherlands, Norway, Sweden, Switzerland, Hungary, Turkey
- **Asia:** China, India, Malaysia, Singapore, Thailand, Vietnam

Our team combines deep technical knowledge of IFS with an understanding of regional laws, tax frameworks, and financial standards - so you get a solution that works both globally and locally.

Why Platned?

- IFS Gold Services Partner with global project experience
- Decades of experience in delivering localisation across versions and industries
- Expertise in both core finance and regulatory compliance
- Agile and collaborative delivery approach

Make IFS work the way your business works - everywhere

Whether you're rolling out a multi-country implementation or fine-tuning localisation in a single market, Platned can help. We bring the insight, structure and support needed to achieve local compliance and global alignment with IFS Cloud.
