

# Asset management in IFS Cloud™, delivered by Platned

## Maximize uptime, minimize costs

Managing diverse asset portfolios can be complex. Without the right tools, organizations face unplanned downtime, rising costs, and reduced visibility. **IFS Cloud™ Enterprise Asset Management**, delivered by Platned provides an intelligent, end-to-end solution. With AI-driven automation and embedded insights, your teams can track and manage every stage of the asset lifecycle - from planning and design to operations and decommissioning - directly improving uptime, performance, and profitability.

## Benefits

- **Maximize asset value and uptime**  
Manage the complete lifecycle of your assets to reduce downtime, extend service life, and increase profitability. Improve utilization and availability to cut costs and enhance efficiency.
- **Improve performance and reliability**  
Monitor asset health in real time, predict failures, and adapt maintenance strategies based on data. Reduce unplanned downtime and avoid costly breakdowns.
- **Empower your teams with insights**  
Give teams real-time visibility and control to make better decisions about asset replacement, refurbishment, or renewal.
- **More than asset management**  
Expand beyond EAM by connecting IFS Cloud™ with finance, supply chain, service management, and project management. Gain a complete view of asset performance across sites and facilities, reduce inventory costs, and support sustainability goals.

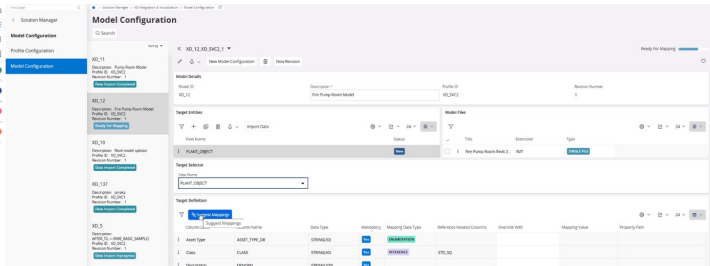

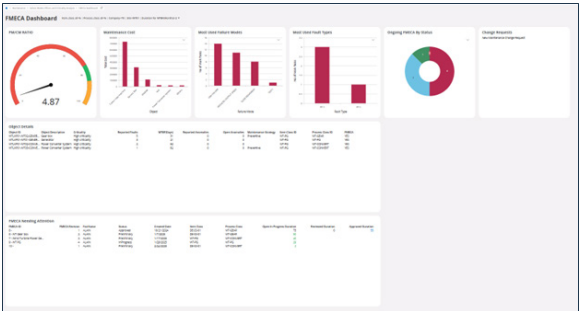

## Key capabilities

### Asset planning and realization

Streamline the journey from concept to operational asset. Plan, design, and deliver complex projects with full cost and progress control. Integrated procurement and material management reduce errors and accelerate completion.

### Asset operations and maintenance

Standardize maintenance processes and align them with operations. Define preventive and corrective work, close tasks efficiently, and track performance with industry-standard KPIs.

### Maintenance planning

Use AI-powered planning to optimize schedules, reduce downtime, and prioritize critical assets. Planners can focus on exceptions while automation manages dependencies, resources, and materials.

### Asset performance management

Leverage AI and IoT to monitor real-time performance, identify anomalies, and predict failures. Use FMECA and IFS Copilot to refine strategies, reduce costs, extend asset life, and lower environmental impact.

### B2B contracting

Collaborate seamlessly with subcontractors through a dedicated portal that manages bids, awards, documentation, and progress reporting.

### GIS integration

Automate document creation, approvals, and versioning with secure, enterprise-wide access and workflows.

### Document management

Automate document creation, approvals, and versioning with secure, enterprise-wide access and workflows.

### Extended capabilities

IFS Cloud™ is more than EAM. As part of a unified platform, it integrates with ERP and service management, offering embedded AI, analytics, and extended features such as workforce certification tracking and safety risk management—without costly third-party integrations.

## Built for asset-intensive industries

Platned and IFS Cloud™ deliver the tools needed to manage the asset lifecycle across industries including:

- **Energy and utilities**
- **Construction and engineering**
- **Manufacturing**
- **Services**
- Telecommunications
- Aerospace and defence

Wherever you operate, Platned helps ensure your assets remain reliable, safe, and performing at their best.

## Why Platned

As an IFS Gold Services Partner, Platned helps US businesses get the most from IFS Cloud™ Asset Management. From deployment to long-term optimization, we ensure your assets deliver maximum value - reducing downtime, extending asset life, and turning asset management into a driver of sustainable business performance.
