

Crystal reporting in IFS Cloud

**Keep reporting steady.
Move forward with confidence.**

According to the latest IFS updates, Crystal Reports will be supported in IFS Cloud only through 26R2.

Most organizations already understand the technical impact. The real issue is how this affects day-to-day operations. Reporting sits at the center of your business, and changing it all at once is rarely practical.

At the same time, you need to continue upgrading IFS Cloud, adopting new capabilities, and improving performance. Without the right approach, reporting quickly becomes a blocker.

A smarter way to handle the transition

This does not have to be a trade-off between stability and progress.

Liquid Crystal changes the approach by removing reporting as a dependency. It allows you to:

- Keep upgrading IFS Cloud without delays.
- Take advantage of new features as they are released.
- Plan your reporting transition on your own timeline.

This is not just about solving a problem. It is about unlocking your ability to move forward.

How it works in practice

Stability now. Flexibility for what comes next.

Liquid Crystal enables you to continue using your existing Crystal reports without redesign or disruption.

In practical terms:

- No changes for users or business processes.
- No need to purchase Crystal Reports Server licenses.
- No additional infrastructure required.
- Ready for production in days, not months.

This removes urgency and gives your team room to focus on higher-value priorities.

Built for real-world environments

Most organizations are managing:

- Large and complex reporting landscapes.
- Limited internal resources.
- Business-critical outputs that cannot change overnight.

Liquid Crystal is designed with this reality in mind, providing immediate continuity while allowing time for better long-term decisions.

The business advantage

This approach is not only safer, it is more cost-effective:

- Avoid unnecessary investment in server licenses.
- Reduce the need for large-scale, immediate migration.
- Limit disruption across teams.
- Remove duplication of systems and effort.

You invest when it makes sense, not when you are forced to.

Supporting an evergreen IFS Cloud strategy

The real value goes beyond reporting.

Liquid Crystal helps you stay aligned with IFS Cloud by enabling you to:

- Adopt new functionality as it becomes available.
- Continuously improve processes.
- Avoid falling behind due to technical constraints.

Instead of working around reporting limitations, you move ahead without them.

Supporting an evergreen IFS Cloud strategy

The real value of Liquid Crystal is what it enables beyond reporting.

It allows your organisation to stay current with IFS Cloud.

- Adopt new functionality as it becomes available.
- Improve processes continuously.
- Avoid falling behind due to technical dependencies.

Instead of working around reporting constraints, you move forward without them.

Why Platned

Platned brings the experience to support both immediate needs and long-term progress:

- Stabilizing reporting quickly and effectively.
- Supporting ongoing IFS Cloud upgrades.
- Enabling a phased, low-risk transition to modern reporting.

This is about more than continuity. It is about enabling growth.

Take the next step

You do not need to solve everything at once. Start by removing the constraint, then move forward with clarity.

A phased path to modern reporting

Once reporting is stable, you can transition at your own pace:

- Identify the reports that deliver the most value.
- Prioritize based on usage and business impact.
- Migrate in phases using Platned's conversion services.

This approach reduces risk, avoids unnecessary effort, and ensures change is controlled and manageable.
