

Boosting project performance for construction and engineering firms

Helping you get greater value from your IFS investment

Construction and engineering businesses depend on IFS to oversee complex projects, diverse assets and large distributed teams. As an IFS Gold Services Partner, **Platned** supports operators across the world to improve the stability, visibility and efficiency of their IFS applications, enabling more predictable delivery and financial control.

Whether your focus is accurate project costing, better commercial oversight, upgrading to **IFS Cloud™**, improving mobile and field execution or ensuring your current system delivers consistent results, Platned has the technical expertise and industry experience needed to drive long term improvement.

Why construction and engineering leaders choose Platned

Platned has extensive experience supporting contractors, infrastructure providers and engineering service organizations. We help customers gain stronger governance across project costing, contract management, commercial control, supply chain coordination, asset maintenance and reporting.

Our services include post go live enhancement, upgrades to IFS Cloud and Apps versions, continuous improvement, global 24/7 support, secure hosting, automation and integration improvements and both technical and functional consulting across all project and financial operations.

Real value delivered for construction and engineering organizations

Platned helps construction and engineering firms operate with stronger cost accuracy, better asset insight and improved project predictability. Below are examples of how we support customers throughout their IFS lifecycle.

Civil engineering contractor

Challenge:

Needed clearer project costing and stronger commercial governance across multiple workstreams.

Platned's work included:

- Implemented IFS Apps 9
- Configuring project and cost management structures
- Improving control of financial and operational data

Result:

More accurate project visibility, better cost tracking and improved financial accountability.

UK construction and infrastructure company

Challenge:

Required reliable and 24 hour support to stabilize operational and financial processes.

Platned's work included:

- Delivering full managed support
- Improving overall system behaviour and functional workflows

Result:

Higher system availability and stronger day to day performance across active projects.

Engineering and asset focused services provider

Challenge:

Better visibility was needed for asset performance and field maintenance activity.

Platned's work included:

- Deploying Dispatch Console and Asset Health Management
- Delivering tailored training and operational dashboards

Result:

More proactive maintenance, increased utilization and clearer operational control.

How Platned supports construction and engineering success

Maximizing the value of your current IFS environment

Platned stabilizes and optimizes existing IFS Apps and IFS Cloud deployments to deliver consistent performance across project, commercial and field operations. Customers benefit from clearer project progress tracking, stronger financial visibility, controlled supply chain activity and improved predictability of outcomes. Engineering changes become more manageable and field execution becomes more coordinated and reliable.

Accelerating your move to IFS Cloud

Platned manages structured and predictable IFS Cloud upgrade programs including readiness assessments, impact reviews, data migration and cleansing, technical uplift, process alignment and user enablement. Teams quickly see the benefit of modern workflows, stronger mobile capabilities and enhanced project and financial controls.

Hosting and managed services built for operational continuity

Multi location construction and engineering businesses need dependable system uptime. Platned provides Azure and AWS hosting combined with full IFS and Oracle administration, global 24/7 support, proactive monitoring and rapid recovery actions. Your IFS environment remains available and able to support growing project activity.

Stronger analytics, reporting and automation

Platned helps improve access to real time operational and commercial information with enhanced reporting, dashboards and analytics. Integrations with engineering systems, field mobility tools and financial platforms provide a unified view of project performance. Automation solutions including ParsaAI and Mahara reduce manual tasks across invoicing, testing, data handling and administrative processes.

Consistency across multi site operations

Construction and engineering organizations often operate across several regions. Platned supports coordinated rollouts, cross country upgrades and long term continuous improvement across all sites. Customers gain consistent processes, centralized oversight and global support that helps maintain system stability and project momentum.

Why Platned is the trusted partner for engineering and project success

Platned is an IFS Gold Services Partner with proven experience in managing IFS projects for construction and engineering organizations of all sizes. Our delivery capability spans North America, Europe, the Middle East, APAC and the United Kingdom. We provide complete support across consulting, implementation, upgrades, cloud hosting and ongoing optimization.

Our combination of industry expertise and hands on system knowledge makes us a long term partner focused on improving project certainty, financial control and operational excellence.
